Security Screen Doors 3000 Series

Key Features

Our heavy duty security doors offer a durable quality product that will provide an aesthetically appealing heavy duty door to be used on housing authorities and apartment complexes. We offer several different door designs that will provide maximum protection and durability needed for screen doors. Product is manufactured from the same extruded aluminum frame and stainless steel wire as our security screens. This screen door will hold up to most abuse a screen door can handle.

Security Levels and Code Compliance

These heavy duty security doors are produced from the same extruded profiles that were designed to handle the SMA testing requirements. This will insure a quality product that will handle the abuse taken by the day to day normal operation.

Sizes

All of our screen doors are produced to the specific project requirements. We are planning a stocking program with the standard door sizes of 32 and 36 Widths.

Options

The standard screen door comes with a door kit. This includes an inside and outside push button handle with door closer and chain. Doors come in the following styles: full view. Single kick panel and kick panel with sash support.

Finishes

All of our screens and frames are prepared with a chemical pre-treat system and rinsed to remove any contamination on the surface. They are then painted with an electro statically applied, baked on deluxe polyurethane powder coat. The process ensures a Durable finish for the entire product. This system has been tested under AAMA2603.5 to pass a 1500hour salt spray test.
