Narrow Site Security Screen 5000 Series

Key Features

Extruded aluminum frame designed for light duty security. Panel infill of stainless steel wire mesh or perforated material. Screen design is ideal for light duty security applications along with second and third floor window openings. Provide security from keeping people out and object being thrown at the window and give the owner a durable screen that will handle the day to day abuse.

Security Levels and Code Compliance

Product has been designed to pass a heavy impact testing requirements and a medium forced entry and sag testing.

Options

Screen designed with a narrow sight line for light duty applications. Screen can be attached with or integral hinge and sub frame system or a piano hinge can be installed along the top and spring catches along bottom for light duty applications. Several hinge options to depending on the installation of the product. This product has been used as a split screen for second floor and above application. This allows the ability to have the top section of the screen fixed to the existing window and the lower have operable for access and air conditioning installation. Please contact Centurion should you have a specific request.

Finishes

Screen frames and mesh are prepared using a chemical pre-treat with an electro statically applied, baked on polyurethane powder coat. The finish has passed a 1500 hour salt spray test and conforms to AAMA 2603.8. We offer bronze, beige white as our standard frame colors with black mesh. Special colors are available.
