Heavy Duty Security Screen 7000 Series

Key Features

Our heavy duty security screen can be specified as fixed or operable. This screen is ideal for college universities, housing authorities and detention facilities. Screen design offers maximum protection for window openings. Operable screens are a sub frame screen frame system. Our interlocking hinge with brass bushings has been proven to provide a long lasting performance hinge.

We offer the following locking systems: turn handle with lock rods, spring catches, slam latches, keyed dead bolt locks. The application of the screen will help in the selection of the locking system.

Both frame and sub frame are manufactured with extruded 6063 aluminum to provide a durable long lasting screen frame. The panel infill selected can consist of stainless steel wire mesh or perforated metal. Mesh can be .018, .028" or .047". Gage on perforated can run from 14 to 18.

The product has been designed to meet and exceed the SMA testing requirements for security screens. Impact forced entry and sag resistance.

Options

Sub frame screen frame operable screens and fixed heavy duty security screens.

Finishes

Screen frames and mesh are prepared using a chemical pre-treat with an electro statically applied, baked on polyurethane powder coat. The finish has passed a 1500 hour salt spray test and conforms to AAMA 2603.8. We offer bronze, beige white as our standard frame colors with black mesh. Special colors are available.
